

appIT™

Connect & Engage with your patrons

D-Tech International now offers our appIT™, a library app developed exclusively for patrons to use on mobile devices. The library app is the first app of its kind in the library market and has been designed and developed by D-Tech.

Utilizing either barcode or RFID technology, D-Tech has developed the library app to perform multiple functions that would have been previously performed at the physical location. These features include checkout of items, checking of account status, account payments, renew items, check library locations and hours of operation, chat with a librarian and more. The app also has the capability to switch the RFID tag's security OFF to allow full integration with all RFID implementations.

The use of appIT™, will help public and academic libraries realize cost savings by minimizing the need for more checkout kiosks and related ongoing maintenance costs. The library app frees staff to focus more on patron assistance rather than routine administrative tasks that can now be handled by patrons through the app. Additionally, the app can be used to engage and communicate with patrons through advertising space and patron messaging.

"It is part of our mission to have a keen eye on innovation with the purpose of keeping the library as a relevant hub for interaction for the communities they serve. The library of today can no longer be restrained by physical walls. We designed and developed the app so libraries can extend their services beyond the library environment and allow patrons to access the services they need when it matters in a secure online environment, appIT™, has only just started and we have many more ideas that will be added over the next few months.

APP USE IS GROWING AT 119% A YEAR - CONNECT AND ENGAGE WITH YOUR PATRONS AND REMOVE YOUR LIBRARY WALLS

FEATURES

- Android or Apple
- NFC - RFID Tag reading
- RFID Security tag switch off
- Barcode scanning for none RFID sites
- Checkout items
- Renew Items
- Check account
