

holdIT™

SELF-SERVICE  
**RESERVATIONS  
KIOSK**

D-Tech's holdIT™ is an automated self-service reservations kiosk which facilitates extended library opening hours by providing a self service reservations collection point that can be positioned in either internal or external conditions.

## FEATURES

- Safe and secure storage
- Adequate locker space for varying sizes of reservation
- Real time connection to LMS
- Barcode, Mifare, Biometrics, RFID for user ID
- Smart phone ID reader functionality
- Many colour options available
- LED backlighting colour options
- Thermostatically controlled temperature management system as standard
- Connection to LMS via SIP2
- Meets all required Safety Standards and is fully CE, UL Certified.
- 14 lockers as standard
- 9 locker kiosk with touch screen monitor
- 8 locker with returns bin modules
- Modular design allowing for additional bays to be added at a later date
- Up to 102 lockers per kiosk
- Easy staff loading
- Remote access and reporting system

The holdIT™ automated self-service reservations kiosk allows library staff to remotely load lockers with reservation items with our loaning application. Just scan the item in the application. The holdIT™ allocates a locker and prints a receipt with a barcode – the receipt will indicate the items and locker number. Once a trolley is full of items ready to be loaded into the holdIT™, the staff member has to just scan the barcode on the receipt that is attached to the reserved item which will automatically unlock the correct locker, place the item in and close the door. The user will simply scans their user card and the screen will display the items. The user accepts, the locker is opened and the items are issued.

If the holdIT™ is used for issuing other items the software is like a self-check system. However, the user would select the item they wish to borrow, the system would issue the item and unlock the door. The item would be issued via SIP2 in a library. However, if not in the library, we would supply our own database or connect to a third party database (third party database connections will be an extra cost).

## DIMENSIONS

Main terminal unit (9 lockers included):  
**H 1900mm x W 520mm x D 450mm**

Size locker unit (14 lockers included):  
**H 1900mm x W 520mm x D 450mm**

Size locker unit with returns bin (8 lockers included):

**H 1900mm x W 520mm x D 450mm**

Locker internal size for all units:

**H 120mm x W 500mm x D 400mm**

Building 136, Bentwaters Parks, Rendlesham, Woodbridge, Suffolk, IP12 2TW
